70° Vertical HE mouse: minimises RSI

The Vertical HE Mouse has a 70° vertical grip which provides a neutral, relaxed position of the hand and wrist. You move from the forearm instead of your wrist, which fights RSI. The mouse fits comfortably in your hand, and supports your wrist and fingers. In standard size Vertical HE 70° comes right and left handed and wired and wireless. Also sized for the larger hand in right hand only wired and wireless. 4 buttons and scroll wheel on every model. Buttons can be customised to your personal needs. **Large model has DPI switch and speed guide on the face.**

Choose the size mouse for you:

To get the right size of mouse for best fit, measure from the top of the middle finger to the crease where the wrist meets the hand; (see the blue line in the hand picture at the left: **Medium size for up to 185mm; Large Size for over 185mm. If borderline try the smaller size.**

Product size: Medium 105mm long x 83mm wide x 76mm high: Large 110mm long x 93mm wide x 79mm high. Compatibility: Windows, Mac, Linux.

- Award Winning Design;** The ergonomic shape gives a grip like an ordinary mouse but the pronation which varies individually between 60 and 70 degrees eliminates the crossover of the ulna and radius forearm bones thus providing relaxation for the arm and fingers; the "repose" position. The feel good feature comes from a soft rubber coating grip with a silica gel scroll wheel and specially designed finger support and thumb slot.
