

Specifications

Unlike standard mice, the Newtral Mouse is entirely customised, offering 3 interchangeable gripping options to suit your unique needs. Each grip type targets a different gripping style or mousing task, offering solutions targeted toward: Precision Grip; a Balance Grip; or Ergo-Grip (full hand/wrist support, including a gel cushion). All grips are entirely neutral, so you won't put strain on your wrist, fingers, or forearm. Just connect through your USB cable, and you'll be able to take advantage of this mouse's 4000 DPI precision.

The mouse is available in two different sizes, so you will also ensure these solutions are molded to your dimensions. To get the right size of mouse for best fit, measure from the top of the middle finger to the crease where the wrist meets the hand:
Small/medium size for up to 180mm;
Large size for over 180mm.
If borderline try the smaller size.
