PUK Wrist Rest Trailer for Keyboard & Mouse

Here's a great way to keep your hand/s off the work top without the need of a static padded wrist or keyboard rest.

You can trail across the front of the keyboard or behind your mouse without your hand rubbing on a pad. The PUK gel pad glides across the fixed surface instead of your hand.

PUK is a smooth gliding rest for your wrist which trails behind your mouse or across the front of your keyboard providing a sculpted shape support for your wrist to relieve pressure on your carpal tunnel.

At 19mm high PUK lifts your wrist to a similar height as your keyboard to give correct alignment to the keypads. If your mouse does not have palm or hypothenar pad support PUK will do the job for you.

- Smooth, comfortable, gliding wrist rest for mouse and keyboard.
- Trails behind your mouse with no need for attachments.
- The perfect alternative for a fixed keyboard rest.
- Sculpted shape supports wrist without pressure on carpal tunnel.
- Non-allergenic thermoplastic elastomer (non-Latex hybrid of plastic and rubber).
- Designed for mouse and keyboard use and where you need help to steady your hand.
