

## Specifications

---

The RockstickMouse takes the latest approach to mousing — a 70 to 90 degree vertical one. Unlike a traditional mouse, where you lay your hands flat on the mouse, vertical mice like the Rockstick rotate your hands by up to 90 degrees, so that they are mousing in handshake position. This minimizes pronation, and, for many people, is a much more natural solution. But going vertical isn't the Rockstick's only innovation: this is the only ergonomic mouse that offers **hand-clicking rather than finger-clicking**.

There's no other solution quite like it. The Rockstick Mouse is a leading vertical mouse, as it will provide you with ample support, and it also is **fully ambidextrous**.

The Rockstick Mouse features laser DPI (button on top of mouse) for maximum precision, and is completely plug and play. **You will like the little**

**finger support.**

**Choose the right size mouse for you:** To get the right size of mouse for best fit, measure from the top of the middle finger to the crease where the wrist meets the hand; Small/medium size for up to 180mm; Large Size for over 180mm. If borderline try the smaller size

**Code 20GRMW Rockstick Mouse Medium wireless**

**Code 20GRLW RockstickMouse Large wireless**
